

高感度ダイヤモンド量子センサ実現のための ダイヤモンド微細加工技術の開発

Tetsu Takashi and Takashi Yatsui
Toyohashi University of Technology

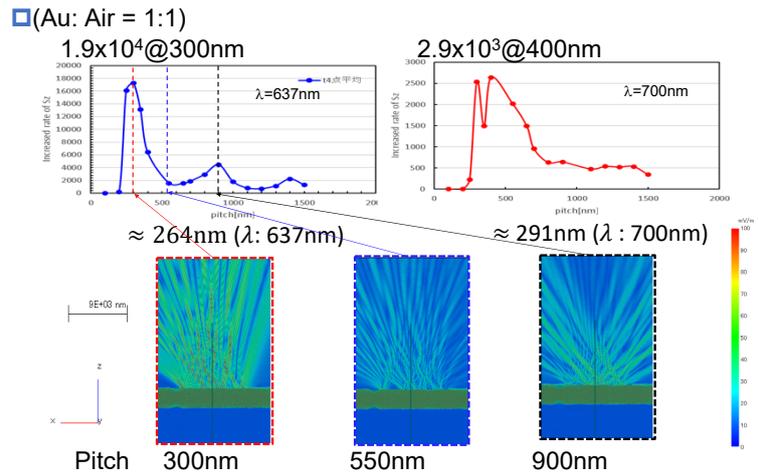

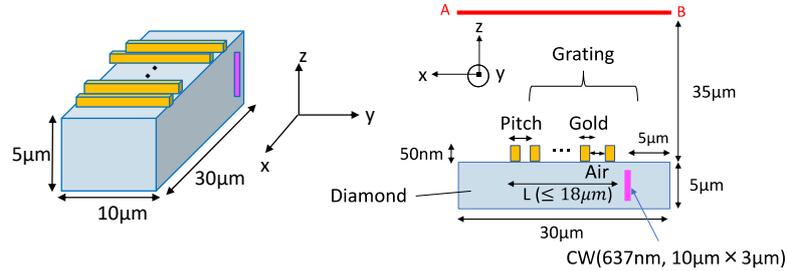

Nitrogen-Vacancy (NV) center in diamond

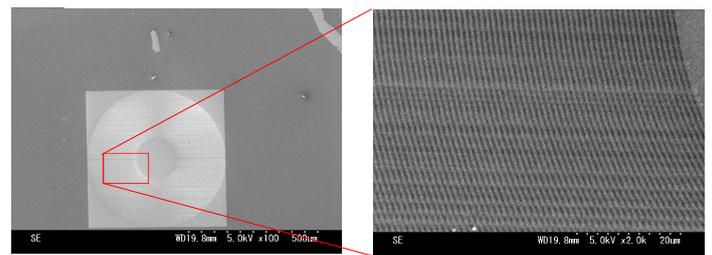

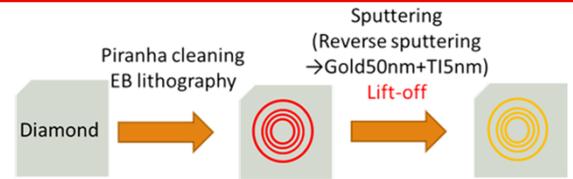

- Color center → Strong PL (red light)
- ○ Wide dynamic range of magnetic sensitivity (pT ~ μT)
- × High refractive index → Low light-extraction efficiency

Acknowledgement

This work was partially supported by MEXT Q-LEAP (JPMXS0118067395), CAO PRISM, KAKENHI (18H01470), Asahi Glass Foundation. The authors wish to express special thanks to Dr. Takeshi Hizawa (Toyohashi University of Technology) for active support.

Research purpose

1. Develop **high-sensitivity magnetic sensor** with NV center

A. Kuwahata, TY, et al., *Sci. Rep.* **10**, 2483 (2020)

2. Improve **light-extraction efficiency** (our experimental setup ≈ 10⁻¹¹) of NV center using **grating coupler**

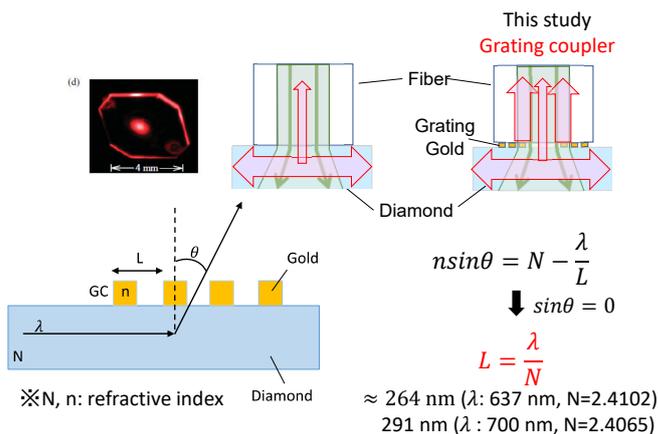

$$\eta \propto \frac{\Delta\nu}{C\sqrt{I_0}}$$

η: Minimal magnetic sensitivity of NV center

I₀: PL intensity from NV center

I₀ ↑ → Better magnetic sensitivity

Improving the emission output from bulk diamond

※N, n: refractive index

≈ 264 nm (λ: 637 nm, N=2.4102)
291 nm (λ: 700 nm, N=2.4065)
